Lookout Cloud Security Platform

Enabling state and local government to achieve zero trust

Global leader in Mobile Endpoint Security and Gartner Magic Quadrant Visionary for security service edge (SSE)

In today's environment, security teams cannot trust users or devices that attempt to connect to their network, applications and data, even after they have authenticated. Instead, they must constantly verify the risk level to ensure that users or devices can be trusted. Organizations need strategies that meet modern-day security standards.

Lookout delivers a unified SSE platform for zero trust

The Lookout Cloud Security Platform consolidates your data security and SSE strategy into a unified platform while simplifying access management and compliance (i.e. PCI, PHI, HIPAA) across all your endpoints, clouds, and on-premises infrastructure. With a single place to monitor risk and enforce security policies, you can protect your data from both external and insider threats or accidental data leakage.

By integrating our industry-leading Mobile Endpoint Security (MES) and Security Service Edge SSE solutions, we enable organizations to deploy intelligent zero-trust security that safeguards sensitive data without hindering productivity.

Lookout is the only SSE provider with an integrated Mobile Endpoint Security offering.

Secure Cloud Access (CASB)

Gain centralized visibility into and control over managed or unmanaged SaaS, IaaS and private apps and data. Achieve integrated zero-trust access control, data protection, threat prevention and policy compliance across leading SaaS apps.

Secure Private Access (ZTNA)

Enable users with secure remote access to apps in private clouds and inside data centers.

Mobile Endpoint Security

Secure against phishing, app, device, and network threats across personal, managed, and unmanaged mobile devices.

Secure DNS

By continuously monitoring the web for malicious sites, Lookout delivers comprehensive protection against phishing attacks in real-time.

Secure Internet Access (SWG)

We detect malicious websites in real-time, and when needed, block access to your employees, business, and data.

Mobile Endpoint Detection and Response (EDR)

Query our app and device telemetry and search continuously updated results of our analysis of malicious and phishing websites.

About Lookout

Lookout, Inc. is the endpoint to cloud security company purpose-built for the intersection of enterprise and personal data. We safeguard data across devices, apps, networks and clouds through our unified, cloud-native security platform — a solution that's as fluid and flexible as the modern digital world. By giving organizations and individuals greater control over their data, we enable them to unleash its value and thrive. Lookout is trusted by enterprises of all sizes, government agencies and millions of consumers to protect sensitive data, enabling them to live, work and connect — freely and safely.
